Level 2

CORAL REEFS

Polyps video (Book pages 6–7)

- <0:05> Corals don't sleep at night.
<0:12> They use their tentacles to catch food going past in the water.
<0:22> There are many different colours and types of corals.
<0:35> And they can grow for years and years.
<0:41> They sometimes grow together to form reefs as big as a house!

Turtle video (Book pages 20–21)

- <0:13> Turtles love coming to this coral reef because there are lots of small fish living here.
<0:27> These fish eat small animals and plants on the turtles' shells.
<0:34> The fish get food and the turtles get cleaned.
<0:53> There's always a line of turtles waiting by the coral reef.

Octopus and Grouper video (Book pages 24–25)

- <0:06> A grouper can't catch some of the small fish in the coral.
<0:22> It changes colour ...
<0:31> ... and does a headstand.
<0:44> It is showing an octopus where the fish is.
<1:03> The octopus puts its long arms into the coral.
<1:09> The little fish comes out, afraid.
<1:18> Now the grouper or the octopus can catch it.
