Level 4

FAST AND SLOW

Wolves video (Book pages 8–9)

- <0:07> These wolves are hunting bison.
- <0:18> They want to catch a calf because it's the easiest prey.
- <0:35> The mothers try to keep the calves in the centre of the group to protect them.
- <1:00> So the wolves choose one mother and calf and chase them for a long time.
- <1:27> The mother will do anything to protect her calf and keeps him close to her, away from the predators.
- <1:58> Then another wolf joins, and it is hard for the mother to fight all three.
- <2:06> But she still won't stop protecting her calf.

Golden Eagle video (Book pages 14–15)

- <0:08> A golden eagle spends all day looking for food in the mountains.
- <0:27> She can fly over 100 kilometres in one day because of her long, large wings.
- <0:46> She can also see very well and find prey over 3 kilometres away from her.
- <0:56> There is not much food around in winter and there are other predators looking for food, too.
- <1:06> So the eagle must move quickly.
- <1:14> When she sees her prey, she dives down.
- <1:25> She can dive at over 300 kilometres an hour. Only the peregrine falcon is faster than the golden eagle.

Tiger video (Book pages 16–17)

- <0:05> This tiger has lost an eye fighting with another tiger, but she is still very good at hunting.
- <0:15> She is going to hunt prey for her family and at the same time teach her cubs how to do it.
- <0:24> They are watching her as she runs, getting faster and faster.
- <0:30> She doesn't jump through the air, but keeps one of her paws on the ground at all times.
- <0:37> She can move very quickly like this, at over 55 kilometres per hour for a short time.
- <0:45> But she cannot run as fast or as far as a cheetah.
