Transcripts

Level 2

### Which old computer was the biggest? (Book page 13)

- <0:09> In 1946, the first computers were very big. The ENIAC computer was on three walls of a room.
- <0:20> You can visit this old computer in Bangkok.
- <0:25> You needed a big desk for the first home computers!
- <0:31> You could put in a disk.
- <0:36> All your information is on the disk.
- <0:42> Apple made the iMac in 1998. People loved the iMac because all the parts were inside one machine.
- <0:54> The iMac wasn't light brown. You could buy your iMac in different colours – blue, purple, orange, pink or green.

### What other parts can a computer have? (Book page 19)

- <0:09> All the information on your computer is on the hard drive.
- <0:15> The hard drive is inside the computer.
- <0:20> You can use a USB drive with your laptop. You can put information onto this USB drive. Then you can take the USB drive to another computer.

### What do people make with old computer parts? (Book page 27)

- <0:09> People often change their computer, or get new parts for it.
- <0:15> But we can recycle many parts of the old computer.
- <0:23> This is all electronic waste.
- <0:39> The people are finding things to recycle.
